PRODUCT ENGINEERING PROFILE

Full-stack developer focused on AI SaaS products, backend systems, and production-ready web apps. Built real-time collaboration tools, AI code-review workflows, payment-enabled invoicing, PDF automation, semantic search, queues, GitHub integrations, and cloud deployments across modern JavaScript/Python stacks.

SELECTED PRODUCT BUILDS

GhostCTO - AI Technical Co-Founder Platform

AI SaaS concept for non-technical founders, quote validation, roadmaps, developer specs, and CTO-style guidance

- Designed a founder-facing platform that converts vague startup ideas into technical roadmaps, developer-ready specifications, hiring briefs, and quote validation reports.
 - Positioned the product around high-trust AI output: practical estimates, risk flags, privacy-conscious workflows, and clear decision support before founders hire developers or agencies.
- Stack: Next.js, TypeScript, Node.js, PostgreSQL, Prisma, AI APIs, Vercel/Render

DevMind AI - AI Code Review & Documentation Platform

Developer tool with semantic search, streaming AI reviews, GitHub automation, and background processing

- Built AI-assisted code review flows with real-time streaming output, repository analysis, semantic search, and GitHub webhook-triggered review automation.
 - Implemented queue-based processing, vector embeddings, OAuth integration, REST APIs, and a product UI focused on actionable engineering feedback instead of generic AI responses.
- Stack: React, Node.js, PostgreSQL, Prisma, LangChain, Gemini AI, pgvector, BullMQ, Redis, GitHub OAuth

D-Desk - Real-Time Collaborative Task Manager

Kanban-style productivity app with live updates, authenticated collaboration, and structured API architecture

- Developed a real-time task management system with Kanban boards, drag-and-drop workflows, WebSocket/live updates, JWT authentication, and backend-driven state management.
 - Structured the application around clean API boundaries, database-backed task persistence, and responsive UX patterns suitable for small teams and remote workflows.
- Stack: React, Node.js, PostgreSQL, Socket.io, Prisma, JWT, REST APIs

InvoiceFlow - Freelancer Invoicing & Proposal System

Business workflow app for invoices, payments, proposals, email delivery, and revenue visibility

- Built an invoicing product with PDF generation, email sending, Stripe one-time payments, proposal builder flows, and a revenue dashboard for freelance business operations.
 - Connected transactional workflows across database models, payment handling, document generation, and email infrastructure to reduce manual admin work for freelancers.
- Stack: React, Node.js, PostgreSQL, Prisma, Puppeteer, Stripe, Nodemailer

ENGINEERING STRENGTHS

- AI SaaS product architecture and implementation
 - Backend API design, auth flows, database modeling
 - Real-time systems using WebSockets and live state sync
- Payments, PDFs, email automation, and SaaS workflows
 - Queues, Redis, vector search, semantic retrieval
 - Deployment across Vercel, Render, AWS, Docker basics
