

KARAN SAINI

Full-Stack Engineer — AI Products & Backend Systems

India • +91 9116796083 • karan0saini23@gmail.com • linkedin.com/in/karansaini-dev • github.com/karansaini46 • karanlabs.online

SUMMARY

Full-stack engineer who ships production software solo, end to end — schema to deployed UI. Since December 2025 I've built six independent products, including **three that are monetized** (Stripe, Gumroad, AdSense), an **autonomous AI agent that opens its own pull requests**, and a real-time collaboration app built on WebSockets. Looking for a remote engineering role on a small team that ships fast.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go

Frontend: React, Next.js, Tailwind CSS, Three.js, WebGL, Vite

Backend: Node.js, Express, REST APIs, Socket.io / WebSockets, BullMQ, JWT Auth

Data & AI: PostgreSQL, Prisma, MongoDB, Supabase, pgvector, LangChain, Gemini API, vector embeddings / semantic search

Infra & Tools: Docker, AWS, Vercel, Render, Cloudflare, Redis, Stripe, GitHub Webhooks/OAuth, Puppeteer, Nodemailer

INDEPENDENT PROJECTS

India | Dec 2025 - Present

DevMind AI

AI code review & semantic search platform

- Built a GitHub webhook pipeline that reviews pull requests automatically, scoring changes for **security, performance, and production-readiness** using LangChain + the Gemini API.
- Added **pgvector-based semantic code search** and GitHub OAuth, and queued reviews through **BullMQ/Redis** with retry and failure handling so a slow AI call never blocks the app.

InvoiceFlow

Invoicing & payments SaaS — launched, \$39 lifetime deal

- Shipped a full invoicing and proposal platform — Puppeteer-generated PDFs, Nodemailer delivery, one-time Stripe payments, and revenue tracking — and sold it as a **\$39 Stripe lifetime deal**.
- Added two Gemini-powered features (plain-English invoice creation, AI-adjusted follow-up timing per client) with **static fallbacks** so a Gemini outage never breaks the core product.
- Automated collections: scheduled sends via Resend, Stripe-webhook auto-paid marking, and **BullMQ delayed-job** reminder queues.

GhostCTO

AI co-founder SaaS — \$99 lifetime deal

- Built an AI technical co-founder SaaS for non-technical founders — eight modules covering roadmap generation, stack advice, spec writing, developer vetting, code audit, and CTO chat — and sold it as a **\$99 Gumroad lifetime deal**.
- Routed features across **Gemini 2.0 Flash and 2.5 Pro** via the Google AI SDK, picking the model per task to balance cost and response quality.

D-Desk

Real-time collaborative task manager

- Built Kanban boards with drag-and-drop, JWT auth, and a **PostgreSQL-backed REST API**.
- Used **Socket.io** to keep board state synchronized across every connected user in real time.

Also shipped: ToolboxHQ, a 10-tool utility suite monetized through AdSense and a Pro subscription, and Phantom, an autonomous GitHub App that reads issues, writes the fix, and opens its own pull requests.

ADDITIONAL EXPERIENCE

Founder & Operator, Senpai Styles — India

2024 - Present

- Run product strategy, e-commerce operations, launch planning, and brand positioning for an anime-inspired direct-to-consumer streetwear brand.
